ALARMS

TODAY'S TOPICS

ALARMS

ALARMMANAGER APIs

ALARM TYPES

EXAMPLE APPLICATION

ALARMS

MECHANISM FOR SENDING INTENTS AT
SOME POINT IN THE FUTURE

ALLOWS ONE APPLICATION TO MAKE CODE
EXECUTE, EVEN WHEN THAT APPLICATION
IS NO LONGER RUNNING

ALARMS

ONCE REGISTERED, ALARMS REMAIN
ACTIVE EVEN IF THE DEVICE IS ASLEEP

CAN SET CONFIGURE ALARMS TO WAKE
A SLEEPING DEVICE

ALARMS ARE CANCELED ON DEVICE
SHUTDOWN/RESTART

ALARM EXAMPLES

MMS – RETRY SCHEDULER

SETTINGS – BLUETOOTH DISCOVERABLE
TIMEOUT

PHONE – USER INFO CACHE

ALARMMANAGER

CREATE & MANAGE ALARMS INDIRECTLY, BY
INTERACTING WITH THE ALARMMANAGER

GET A REFERENCE TO THE ALARMMANAGER
BY CALLING THE CONTEXT CLASS'

```
getSystemService(Context.ALARM_SERVICE)
```

CREATING ALARMS

// one-shot alarm

```
void set(int type, long triggerAtTime,  
        PendingIntent operation)
```

CREATING ALARMS

// repeating alarm

```
void setRepeating(int type,  
                  long triggerAtTime,  
                  long interval,  
                  PendingIntent operation)
```

CREATING ALARMS

// repeating alarm with inexact trigger criteria

```
void setInexactRepeating(int type,  
                        long triggerAtTime,  
                        long interval,  
                        PendingIntent operation)
```

INTERVAL OPTIONS

INTERVAL_FIFTEEN_MINUTES

INTERVAL_HALF_HOUR

INTERVAL_HOUR

INTERVAL_HALF_DAY

INTERVAL_DAY

ALARM TYPES

TWO DEGREES OF CONFIGURABILITY

HOW TO INTERPRET TIME

WHAT TO DO IF THE DEVICE IS SLEEPING
WHEN THE ALARM FIRES

INTERPRETING TIME

REALTIME – RELATIVE TO SYSTEM CLOCK

ELAPSED – RELATIVE TO TIME SINCE
LAST BOOT

SLEEPING DEVICES

WAKE UP DEVICE NOW & DELIVER INTENT

WAIT TO DELIVER INTENT UNTIL DEVICE
WAKES UP

ALARM TYPE CONSTANTS

RTC_WAKEUP

RTC

ELAPSED_REALTIME

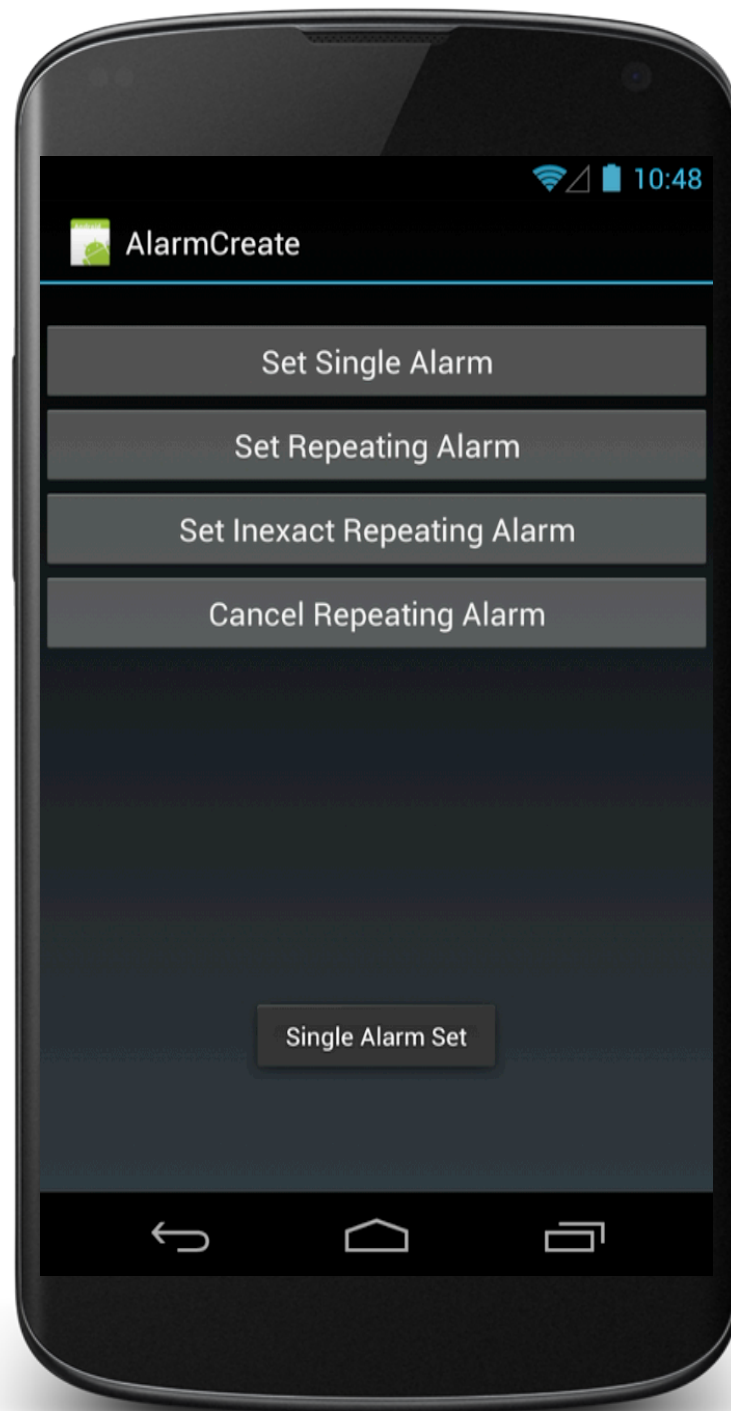

ELAPSED_REALTIME_WAKEUP

PENDINGINTENT

```
PendingIntent getActivity(  
    Context context,  
    int requestCode, Intent intent,  
    int flags, Bundle options)
```

```
PendingIntent getBroadcast(  
    Context context,  
    int requestCode,  
    Intent intent, int flags)
```

```
PendingIntent getService(  
    Context context,  
    int requestCode,  
    Intent intent, int flags)
```

ALARMCREATE

```
@Override
public void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);

    setContentView(R.layout.main);

    // Get the AlarmManager Service
    mAlarmManager = (AlarmManager) getSystemService(ALARM_SERVICE);

    // Create an Intent to broadcast to the AlarmNotificationReceiver
    mNotificationReceiverIntent = new Intent(AlarmCreateActivity.this,
        AlarmNotificationReceiver.class);

    // Create an PendingIntent that holds the NotificationReceiverIntent
    mNotificationReceiverPendingIntent = PendingIntent.getBroadcast(
        AlarmCreateActivity.this, 0, mNotificationReceiverIntent, 0);

    // Create an Intent to broadcast to the AlarmLoggerReceiver
    mLoggerReceiverIntent = new Intent(AlarmCreateActivity.this,
        AlarmLoggerReceiver.class);

    // Create PendingIntent that holds the mLoggerReceiverPendingIntent
    mLoggerReceiverPendingIntent = PendingIntent.getBroadcast(
        AlarmCreateActivity.this, 0, mLoggerReceiverIntent, 0);
```

ALARMCREATE

```
// Set up single alarm Button
final Button singleAlarmButton = (Button) findViewById(R.id.single_alarm_button);
singleAlarmButton.setOnClickListener(new OnClickListener() {
    @Override
    public void onClick(View v) {

        // Set single alarm
        mAlarmManager.set(AlarmManager.RTC_WAKEUP,
            System.currentTimeMillis() + INITIAL_ALARM_DELAY,
            mNotificationReceiverPendingIntent);

        // Set single alarm to fire shortly after previous alarm
        mAlarmManager.set(AlarmManager.RTC_WAKEUP,
            System.currentTimeMillis() + INITIAL_ALARM_DELAY
                + JITTER, mLoggerReceiverPendingIntent);

        // Show Toast message
        Toast.makeText(getApplicationContext(), "Single Alarm Set",
            Toast.LENGTH_LONG).show();
    }
});
```

ALARMCREATE

```
// Set up repeating Alarm Button
final Button repeatingAlarmButton = (Button) findViewById(R.id.repeating_alarm_button);
repeatingAlarmButton.setOnClickListener(new OnClickListener() {

    @Override
    public void onClick(View v) {

        // Set repeating alarm
        mAlarmManager.setRepeating(AlarmManager.ELAPSED_REALTIME,
            SystemClock.elapsedRealtime() + INITIAL_ALARM_DELAY,
            AlarmManager.INTERVAL_FIFTEEN_MINUTES,
            mNotificationReceiverPendingIntent);

        // Set repeating alarm to fire shortly after previous alarm
        mAlarmManager.setRepeating(AlarmManager.ELAPSED_REALTIME,
            SystemClock.elapsedRealtime() + INITIAL_ALARM_DELAY
                + JITTER,
            AlarmManager.INTERVAL_FIFTEEN_MINUTES,
            mLoggerReceiverPendingIntent);

        // Show Toast message
        Toast.makeText(getApplicationContext(), "Repeating Alarm Set",
            Toast.LENGTH_LONG).show();
    }
});
```

ALARMCREATE

```
// Set up inexact repeating alarm Button
final Button inexactRepeatingAlarmButton = (Button) findViewById(R.id.inexact_repeating_alarm_button);
inexactRepeatingAlarmButton.setOnClickListener(new OnClickListener() {

    @Override
    public void onClick(View v) {

        // Set inexact repeating alarm
        mAlarmManager.setInexactRepeating(
            AlarmManager.ELAPSED_REALTIME,
            SystemClock.elapsedRealtime() + INITIAL_ALARM_DELAY,
            AlarmManager.INTERVAL_FIFTEEN_MINUTES,
            mNotificationReceiverPendingIntent);
        // Set inexact repeating alarm to fire shortly after previous alarm
        mAlarmManager.setInexactRepeating(
            AlarmManager.ELAPSED_REALTIME,
            SystemClock.elapsedRealtime() + INITIAL_ALARM_DELAY
                + JITTER,
            AlarmManager.INTERVAL_FIFTEEN_MINUTES,
            mLoggerReceiverPendingIntent);

        Toast.makeText(getApplicationContext(),
            "Inexact Repeating Alarm Set", Toast.LENGTH_LONG)
            .show();
    }
});
```

ALARMCREATE

```
// Set up cancel repeating alarm Button
final Button cancelRepeatingAlarmButton = (Button) findViewById(R.id.cancel_repeating_alarm_button);
cancelRepeatingAlarmButton.setOnClickListener(new OnClickListener() {

    @Override
    public void onClick(View v) {

        // Cancel all alarms using mNotificationReceiverPendingIntent
        mAlarmManager.cancel(mNotificationReceiverPendingIntent);

        // Cancel all alarms using mLoggerReceiverPendingIntent
        mAlarmManager.cancel(mLoggerReceiverPendingIntent);

        // Show Toast message
        Toast.makeText(getApplicationContext(),
            "Repeating Alarms Cancelled", Toast.LENGTH_LONG).show();
    }
});
}
```
